

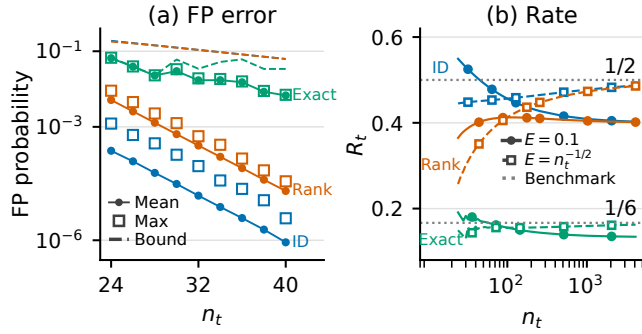

Fig. 1. Noiseless RS tagging: (a) sampled mean and maximum FP probabilities with uniform bounds; (b) finite rates and asymptotic benchmarks.

Single-column layout check. The figure is included at the native column width; it is not a scaled-down copy of the former two-column layout.

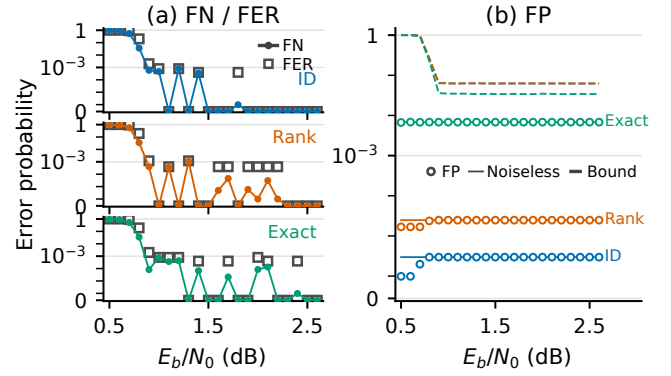

Fig. 2. Packed BFC over AWGN: (a) FN and payload FER; (b) FP, noiseless reference, and additive diagnostic.

Both plots retain the original data and zero observations. Function families are combined except in the three-row FN/FER panel; all legends are placed inside the axes. No uncertainty shading is shown.
